Golang Developer

SUMMARY

I'm a skilled Golang developer with a strong history of creating fast, scalable backend apps. I'm experienced in using CI/CD pipelines and building RESTful APIs. I love writing code that's easy to understand, maintain, and follows the best methods.

EDUCATION

Bharathiar University

Bachelor's of Computer Application 2015-18

SKILLS

Programming Skill

- Go
- Docker
- PostgreSQL
- Unit Testing
- DSA
- Kubernetes
- MongoDB
- C

Networking & Services

- Go
- Docker
- Git
- AWS
- RestAPI
- GitHub
- CI/CD
- Postman

LANGUAGES

- English
- Malayalm
- Hindi
- Tamil

PROJECTS

E-Commerce

Project 1

My first project was a complete e-commerce website selling clothes. The platform is fully functional, offering users a smooth and efficient online shopping experience.

- Implemented JWT authentication and authorization.
- Utilized PostgreSQL as the database.
- Developed RESTful APIs with the Gin framework
- Containerized the application using Docker
- Deployed on an AWS EC2 instance.

Technologies Used: Go,Gin Framework, postgresSQL,JWT,Razorpay

Docker-app

I developed a back-end api and dockerize a project and i learned how the dockerization apply

- Postgres as database
- Gin framework
- Containerized using docker

MINI PROJECTS

Unit Test - CI/CD

I developed Unit Tests to cover CRUD operations and integrated them into a CI/CD pipeline for smooth integration. This project helped me refine my skill in writing impactful unit tests, significantly improving the software's overall quality.

- Integrated CI/CD
- PostgreSQL as the database
- Integrated testing package of Go

Mongo CRUD

I Developed CRUD operations using Golang for MongoDB, implementing a robust backend system for efficient data management. Created functions for inserting, querying, updating, and deleting data, leveraging Golang's concurrency and MongoDB's flexibility.
